OBJECTIVE

Motivated undergraduate IT student with a strong interest in cybersecurity, network defense, and threat monitoring. Seeking a SOC Analyst internship to apply hands-on home lab experience with Wazuh SIEM, Wireshark, and Kali Linux, while contributing to real-world security operations and expanding skills in log analysis and incident response.

EDUCATION

Bachelor in Information Technology (BIT)

Expected: Late 2026

Padmashree College — Kathmandu, Nepal

- Relevant coursework: Computer Networks, Information Security, Operating Systems, Database Management

TECHNICAL SKILLS

SIEM & Monitoring: Wazuh SIEM (actively learning)

Network Analysis: Wireshark, TCP/IP, DNS, HTTP/S, ICMP, network traffic inspection

Security Tools: Kali Linux, Nmap (port scanning), Metasploit Framework (basic exploitation)

Operating Systems: Linux (Kali, Ubuntu), Windows

Concepts: Log analysis, network protocols, threat detection basics, host-based intrusion detection

PROJECTS

Home Security Lab — Wazuh SIEM Deployment

2026 – Present

- Deployed and configured Wazuh SIEM on a local virtual lab environment to simulate real-world security monitoring
- Integrated Linux agents with the Wazuh manager to collect and forward system logs for centralized analysis
- Monitored security events and analyzed alerts, for simulated attack scenarios
- Gained practical experience in log correlation, file integrity monitoring (FIM), and basic incident triage

Network Traffic Analysis with Wireshark

2025

- Captured and analyzed live network traffic to identify protocols, inspect packets, and detect anomalies
- Studied TCP/IP handshakes, DNS queries, and HTTP sessions to understand normal vs. suspicious traffic patterns
- Used Wireshark display filters to isolate specific traffic types and trace potential indicators of compromise (IoCs)

Network Reconnaissance with Nmap (Lab Exercise)

2025

- Conducted port scanning on a controlled lab network using Nmap to enumerate open services
- Documented findings to simulate a basic vulnerability assessment workflow

Metasploitable 2 — Exploitation with Metasploit Framework

2025

- Set up Metasploitable 2, a deliberately vulnerable Linux VM, in a controlled local lab for ethical hacking practice
- Used Metasploit Framework (msfconsole) to search, select, and configure exploits targeting known vulnerabilities
- Successfully gained access to the target system using, simulating real attacker techniques in a safe, isolated environment
- Gained foundational understanding of the exploit → payload → session workflow and how defenders can detect such attacks

CERTIFICATIONS & SELF-LEARNING

- Actively studying Wazuh SIEM documentation and hands-on deployment best practices
- Learning about SIEM use cases: log management, threat detection rules, and compliance monitoring

KEY STRENGTHS

Analytical Thinking • Self-Motivated Learner • Attention to Detail • Problem-Solving • Team Collaboration
